

Tacview Recorder V2.0

for IL2-Sturmovik: Cliffs of Dover Blitz & Tobruk

By FlyBy (formerly OBT~Easy).

Installation guide.

Disclaimer of liability.

This add-on is provided as is, without any express or implied warranty as to its quality, performance, or fitness for a particular purpose. The user assumes all risks associated with its use. In no event shall the author of the add-on or any person associated with its development be liable for any direct, indirect, incidental, special or consequential damages arising out of the use of or inability to use this software, even if advised of the possibility of such damages. The user is responsible for the use of the add-on and must comply with all applicable laws and regulations. Users are advised to back up their data regularly to avoid any loss in the event of software malfunction. Use of this add-on implies unreserved acceptance of the terms of this disclaimer.

First and foremost...

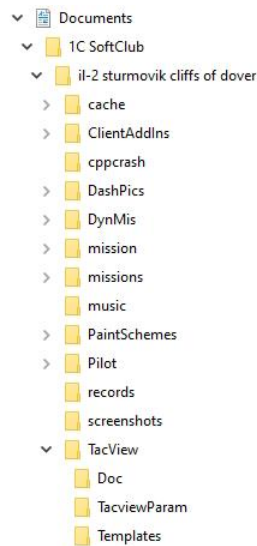

We strongly recommend that you perform a system backup before any installation.

Make sure your system is up to date (Windows updates, graphics drivers, latest game version).

We recommend that you consult the TacviewRecorder user manual ([Tacview Recorder V2.x - EN.pdf](#)) to check if it meets your requirements.

The installation program deploys a DLL (Dynamic Link Library) in the following directory:
 “C:\Program Files (x86)\Steam\steamapps\common\IL-2 Sturmovik Cliffs of Dover Blitz”
 This is the TacviewRecorder.dll (the add-on itself).

If you do not agree with the deployment of this dll, do not install TacviewRecorder on your system.

During the installation procedure, the “Tacview” directory is created in the folder:

“C:\Users\UserName\Documents\1C SoftClub\il-2 sturmovik cliffs of dover”

This is where your flight data files will be saved.

3 sub-directories are also created under this folder.

“Doc” contains the installation guide and user manual (in english and french).

“TacviewParam” contains the 3D model concordance table.

“Templates” contains mission script templates.

Please note: if you're using the older version of the recorder (V1.0), it's advisable to manually uninstall this version via the Windows administration tools.

Make a backup copy beforehand if you wish to use this version again. Note, however, that it is no longer supported.

Bear in mind that if one or more of your missions uses V1.0, you'll need to modify the .cs files for these missions. More information on pages 9, 10 and 11 of the manual.

Installation steps.

If you encounter any difficulties in performing the following operations, please ask someone with sufficient technical skills to help you.

If you haven't already done, you can download the latest version of the TacviewRecorder add-on at the following url

https://drive.google.com/drive/folders/1t7_Ekt4fcp5IT7vz9W8QaY9O09JzbJwF

In this directory you'll find the user manual (fr/en), this installation guide (fr/en) and the installation file "**TacviewRecorder V2 Installer.msi**".

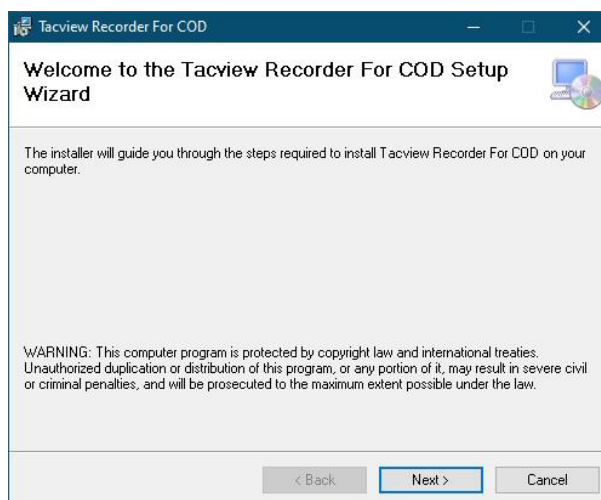

Download the files and save them in the directory of your choice.

Make sure the game is not running. If so, quit the game.

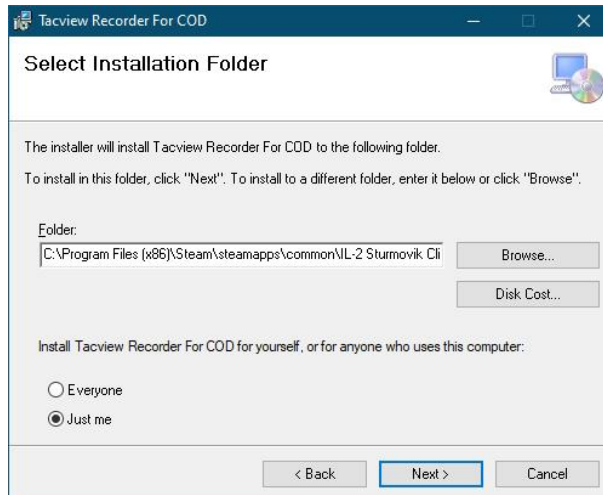

- Right-click on the "TacviewRecorder V2 Installer.msi" program and select "Install" to proceed with installation.

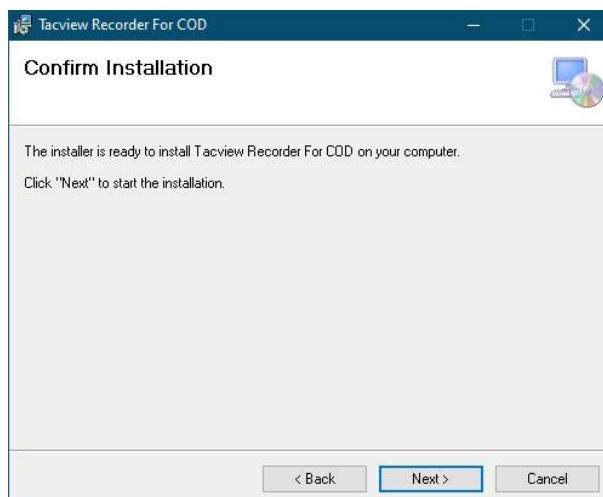

- In the welcome window, click on Next>

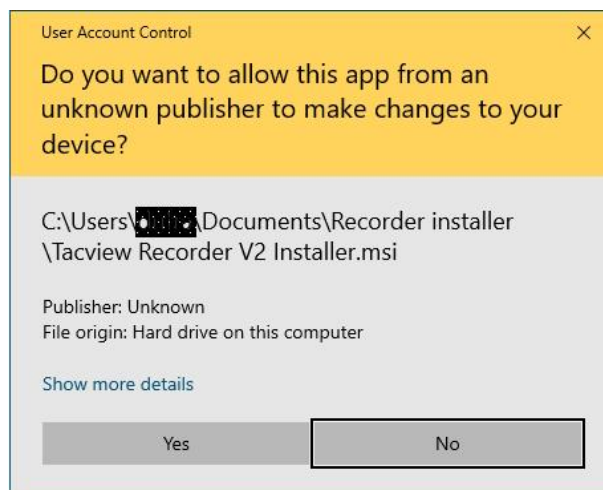

- You can change the default directory where the recorder will be installed. Click [Browse...] to select the alternative destination directory. Click Next> for the next step.

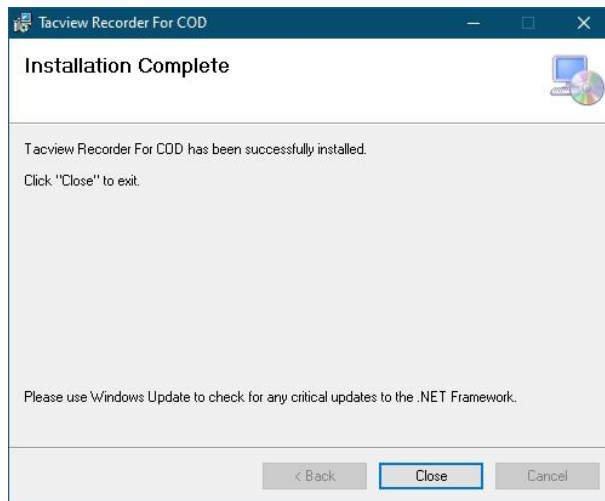

- Click Next> to confirm installation.

- Your system may ask for authorization. Click [Yes] to authorize installation of the dll.

- If all goes well, installation is complete. Click [Close] to exit the program.

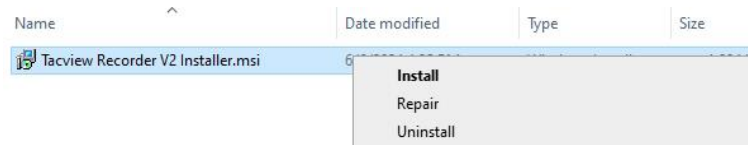

Enjoy your flights.

A final note.

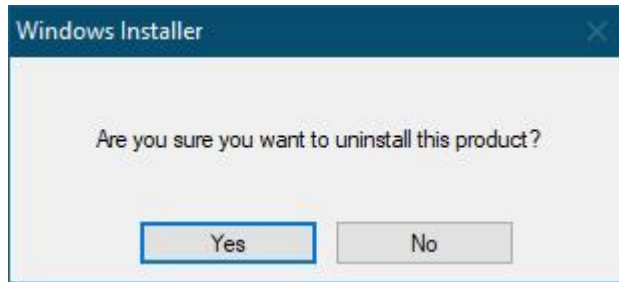

If you have several versions of Cliffs of Dover on your PC, if you're using the VR beta version for example, you'll need to copy the TacviewRecorder.dll file to the other "IL-2 Sturmovik Cliffs of Dover Blitz" directories (not confuse with the "Documents\1C SoftClub\il-2 sturmovik cliffs of dover" directory).

Uninstall the recorder.

- Right-click on the “TacviewRecorder V2 Installer.msi” program and select “Uninstall” to proceed with uninstallation.

- To confirm uninstallation, click [Yes].

Uninstalling will not delete any Tacview files you may have saved.
Remember to modify the scripts of your missions that used the recorder.
